

Empathy Map

Date	15 March 2026
Team ID	TM-OPTICROP-04
Project Name	Smart Agricultural Production Optimization Engine (OptiCrop)
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • "I just want to know exactly what crop will give me the highest profit margins on my specific piece of land." • "Farming rules are changing fast; traditional seasons don't match up with this unpredictable rainfall anymore." • "Is there a simple application where I can put my soil values and get immediate, trustworthy crop recommendations?"	THINKS • Am I over-applying chemical fertilizers and slowly ruining the long-term fertility of my soil? • Investing all my savings into seeds without checking chemical soil suitability feels like gambling. • I hope this software doesn't require complex expensive equipment to measure basic environmental conditions.
PERSONA NAME: RAKESH KUMAR (Role: Smallholder Traditional & Transitional Farmer)	
DOES • Relies on peer advice from neighboring farms and traditional historical calendars to schedule crop cycles. • Manually brings soil profiles to localized government testing labs and waits weeks for a paper report. • Uses an affordable smartphone to check daily local weather forecasts before executing fertilizer distribution.	FEELS • Anxious about seed investments failing due to unpredictable microclimate stress factors. • Frustrated by the lack of direct, instantly actionable tools to check crop compatibility metrics. • Hopeful that scientific optimization engines like OptiCrop can make seasonal yields secure and predictable.
